Employment history

Freelancer

(January 2010 – Present)

Tons of different small/middle sized projects.

Very various experience with many Frameworks/CMS/CMF etc.

Fullstack Developer (as freelancer) – Meork Marketing Corporation, Philippines

(September 2016 – February 2017)

Project: Online Business community(OBC). Philippines(PH) government project.
OBC is open directory of PH companies like yellow pages, but with extended functionality.

Main used languages: php(Laravel 5.2-5.3), javascript(VueJS 2)

This project like LPTracker(see below) started from scratch as single developer.

Main kill-feature is helping with filling out government forms.

For example when company need renew some licenses, renew company registration etc.

Duties

- Core development.
- Trouble shooting and problem solving

Fullstack Developer/DevOp/Tech. consultant – LPTracker, St. Petersburg, Russia

(November 2013 – May 2016)

First and only technical specialist/developer in company during first ~12 months of work.

So any technical processes passed through me.

It was complex SaaS project with many kind of technologies.

Main used languages: php(native), goLang, nodejs, javascript(native, jquery) and of course css/html.

Started as customers websites traffic analytics tool and then continued with step by step development of new components.

"Short" list of common features developed/available in product:

Website traffic analytics with ads-service(Google AdWord-like) integration. main function show customer spendings on ads which help reduce advertising budget without losing their revenues and useful clients sources.

CRM integrated with customers sites with automatic and/or manual collection of leads data(phone, name, email etc) from website.

Employees management with flexible access control.

Integrated telephony with calls recording, automatic connections between customer and his online site visitor. Many other telephony functions and finally launch of sim cards(MVNO) chained with our product: shared customer balance for all sims, calls recording etc.

Duties

- Code developer of product(SaaS: CRM/Telephony/Websites Analytics)
- Suggesting improvements on functionality
- Diagnosing and rectifying any kind of issues
- Maintaining continuity throughout all websites both technically and creatively

- Providing aftercare support for clients on assessing the performance of their sites
